Statement of rescue medication

The medication listed below is prescribed for the treatment of patients with hereditary angioedema (HAE) for emergencies during acute attacks or for regular prophylactic treatment. HAE attacks can be life-threatening for the patient, as there is a risk of suffocation. Therefore the patient must carry his/her prescribed medication in the cabin luggage.

Names of medication/s to be taken on board:

Name and surname of the travelling patient/s:

Name and contact details of the treating physician/s:

About HAE Junior

HAE Junior is a Czech non-profit patient organization seeking to improve the quality of life of children and young people suffering from hereditary angioedema (HAE). HAE is a rare and potentially life-threatening immune disorder, causing recurring painful swellings on various parts of the body. Our main goal is to actively support, represent and defend the interests of our patient members for a better quality of life, including access to modern medication, therapies and healthcare as well as necessary information about the disease and its treatment.
